Abstract not available for JP 10501444 (T)

Abstract of corresponding document: **WO 9629948 (A1)**

The invention concerns a bone plate which is provided with a plurality of holes (2), disposed in the direction of the longitudinal axis (1) of the plate, for accommodating bone screws. The diameter (DL) of at least one hole (2) - measured in the direction of the longitudinal axis (1) of the plate - is larger than the diameter (DQ) of this hole (2) measured perpendicular to the longitudinal axis of the plate (1). At least one of these holes (2) with a smaller diameter (DQ) perpendicular to the longitudinal axis (1) of the plate comprises in the region of this diameter (DQ) a partial thread (3) for receiving a bone screw with a threaded head.
